ALGENESS® NON-SURGICAL TEAR TROUGH CORRECTION IS A SAFE, ALL NATURAL ALTERNATIVE

The tear trough deformity is characterized by the heavy depression under the eyes and what appears to be a skin discoloration. In fact the baggy skin in the lower eyelid is the result of a skin and muscle tissue laxity. Algeness® is a natural solution to correct the tear trough deformity with quick recovery times and very limited swelling.

A NEW ERA OF FILLER FOR TEAR TROUGH IS BORN

Algeness® filler is the culmination of ten years of scientific and clinical research. 100% natural and biodegradable, Algeness® is the first of its kind and is intended for all patients seeking to improve lower eyelid appearance without surgery and the related downtime.

SAFE SOLUTION FOR AN INSTANT RESULT

Tear trough deformity is a major concern for patients seeking a youthful, rested look.

Algeness® LD 1% provides a safe, effective, and immediate solution. When performed by an experienced, trained Algeness® cosmetic physician, it greatly improves the lower eyelid appearance.

Algeness agarose gel structure
Agarose is an hydrocolloid molecule containing water in its structure.

ALGENESS® INJECTABLE IMPLANT A BREAKTHROUGH IN THE MEDICAL AESTHETIC INDUSTRY

Algeness® is a biomaterial consisting of a purified agarose gel (polysaccharide), derived from a sophisticated patented manufacturing process. For the first time in the aesthetic medical history, a 100% natural, biocompatible and biodegradable filler is available to you, free from harmful chemicals.

WITH ALGENESS® 100% NATURAL FILLER, WHAT YOU SEE IS WHAT YOU GET!

Thanks to the Algeness® molecular and biophysical structure, as well as our unique injection procedure, your physician is able to Master your Results™ immediately, with minimal swelling and downtime.

FAQ

■ Am I a good candidate?
If you have dark circles and skin laxity on the lower eyelid, and if you don't have excessive fat accumulation, you are a good candidate for tear trough correction with Algeness® LD 1%.

■ Is it painful?
All injections cause a sense of pain; however, the physician may decide to apply anesthetic cream to the injection site to numb the area before the procedure.

■ What is the difference from other procedures?
Algeness® LD 1% is a safe solution with low risk of complications, minimal swelling and no migration of the product.

■ How will my eyes look like after injection?
Algeness® LD 1% is moldable; while injecting the physician will also massage for an even, harmonious, greater natural look.

■ How long will it last?
Algeness® LD 1% typically lasts for about 3 to 4 months.

■ What are the side effects?
The procedure is relatively painless, although there may be some mild discomfort during the procedure. There may be some redness around the site of injection and a little swelling which might last for 1 to 2 days.

■ What is the recovery time?
Treatment times may vary from 20-25 minutes, depending on the correction level requested by the patient. The recovery time can be from a few hours to 2 days depending on the volume injected. Usually, patients receiving Algeness® treatments return to normal activities straight after injection.

■ What is the difference with other fillers?
Unlike all other fillers, Algeness® is 100% natural and biodegradable. Algeness® achieves its effects without the requirement of any added chemicals, or cross-linked agents and is completely and safely absorbed over time by the body's natural mechanisms.
