ALGENESS ZIGOMATIC VOLUMIZATION IS A SAFE NATURAL SOLUTION.

The face volume loss is the principal cause of facial aging; the changes vary between individuals depending on the patient's bone resorption status, age and soft tissue quality.

Algeness® is a natural solution to restore volume loss with limited swelling and downtime.

A NEW ERA OF INJECTABLE IMPLANT IS BORN

Algeness® injectable implant is the culmination of 10 years of scientific and clinical research. 100% natural and biodegradable, Algeness® is the first of its kind and is intended for all patients seeking to improve facial shape without surgery and limited downtime.

SAFE SOLUTION FOR A GREATER FACE HARMONY

A flat zygomatic arch and hollow cheeks makes the face look aged and accentuate the sagging effect of the skin. An Algeness injection on the zygomatic bone surface and on the deep layers of the hypodermis adds volume to the mid face and enhances the malar projection

Algeness agarose gel structure
Agarose is an hydrocolloid molecule containing water in its structure.

Algeness® injectable implant offers a safe, effective, and immediate solution. When performed by an experienced, trained Algeness cosmetic physician, it greatly improves the zygomatic prominence and the cheeks shape, giving patients a natural younger look.

ALGENESS® INJECTABLE IMPLANT A BREAKTHROUGH IN THE MEDICAL AESTHETIC INDUSTRY

Algeness® is a biomaterial consisting of a purified agarose gel (polysaccharide), derived from a sophisticated patented manufacturing process. For the first time in the aesthetic medicine history, a 100% natural, biocompatible and biodegradable filler is available to you.

WITH ALGENESS® 100% NATURAL FILLER, WHAT YOU SEE IS WHAT YOU GET!

Thanks to the Algeness® molecular and biophysical structure, as well as our unique injection procedure, your physician is able to Master your Results™ immediately, with minimal downtime.

FAQ

■ Am I a good candidate?
If you have flat cheek bones with good quality skin, you are a good candidate for malar volumization with Algeness injectable implant as long as you have realistic expectations regarding the results.

■ Is it painful?
All injections cause a sense of pain; however, the physician may decide to apply anesthetic cream to the injection site to numb the area before the procedure.

■ How will my overall face look like after injection?
Algeness® injectable implant is moldable once in place, the physician will inject in different layers of the malar area and will shape the zygomatic arch to create a younger harmonious look.

■ How long will it last?
Algeness® Chin implant typically last for about 12 months or longer depending on the product and volume injected.

■ What are the side effects?
The procedure is relatively painless, although there may be some mild discomfort during the procedure.

There may be some redness around the site of injection and a little swelling for 1-2 days in case of large volume injection.

■ What is the recovery time?
Treatment times may vary from 20-25 minutes, depending on the correction level requested by the patient. The recovery time can be from a few hours to 3 days depending on the volume injected. Usually, patients receiving Algeness® treatments return to normal activities straight after injection.

■ What is the difference with other fillers?
Unlike all other fillers, Algeness® is 100% natural and biodegradable. Algeness® achieves its volumizing effects without the requirement of any added chemicals, or cross-linked agents and is completely and safely absorbed over time by the body's natural mechanisms.
